## ABOUT ME

Gabriel has been working in software development for 28 years, from the early versions of Visual Basic c# through .NET and relational and non-relational databases.

With the evolution of computer systems, he has established himself in integration development with cloud services, especially Microsoft Azure. Gabriel has worked on countless projects, primarily using Microsoft technologies, such as ASP.NET, .NET Framework, ASP.NET, .NET Core, Blazor, Razor, and databases such as Oracle, SQL Server, MySQL, MongoDB, SQL Lite, Access, etc.

IT is his passion. He is constantly updating his knowledge. For the past 18 years, he has focused primarily on SharePoint in all its versions. Among the projects he has worked on in recent years, most have been government projects, for example, the Government of Portugal, the Government of Spain, the Government of Colombia, the European Commission, and the Government of the Community of Madrid.

With SharePoint, he has been involved in migration analysis and site migrations, such as the European Commission's Publications Office, and the creation of hub sites with linked sites for the Spanish government for state ports.

Now, with the evolution of new technologies, the focus is shifting toward Power Platform integration, SPFX with SharePoint, workflow development with Power Automate, AI integration with Copilot Studio, Azure Functions, blob storage, etc. Gabriel is a full-stack developer with knowledge of front-end and back-end, with .NET, Nodejs, and front-end with jQuery, SAS, CSS3, HTML5, React, and Angular. He currently works as a Microsoft technology consultant, especially with SharePoint and Power Platform. You can provide a description of yourself here...
